Sameera KM

Placentia, CA | C: (714) 519-7526 | E: sameerakm02@gmail.com | LinkedIn | GitHub

Technical Profile

Master's Candidate in Computer Science with a strong background in software development and scalable system design through industry internships and academic research. Proven success in contributing to high-traffic systems supporting 20,000+ concurrent users and optimizing UI performance by 40%. Expert in Java, Python, and React, with a focus on building scalable RESTful APIs, data-driven observability tools, and robust software solutions in Agile environments.

Education

California State University — Fullerton, CA
Master of Science, Computer Science | GPA: 3.8/4 — *May 2026*

Sir M Visvesvaraya Institute Of Technology — Bangalore, India
Bachelor of Engineering, Information Science and Engineering | GPA: 8.2/10 — *July 2024*

Experience

Rapt.AI — Santa Clara, CA
Software Engineering Intern — *May 2025 – Sep 2025*

- Engineered scalable frontend features for the Observer Tool, reducing user navigation time by 40% through optimized data presentation and responsive layouts in React.
- Integrated REST APIs to visualize real-time GPU metrics (utilization, memory, power), providing high-fidelity system observability for end-users.
- Optimized state-management logic, resulting in a 60% reduction in load failures and rendering issues.
- Collaborated with designers and stakeholders to implement reusable UI components, ensuring strict adherence to Figma specifications for pixel-perfect delivery.

Xenovex Technologies — Chennai, India
Backend Developer Intern — *March 2023 – May 2023*

- Developed and deployed 8+ RESTful APIs for a state election management portal, scaling the system to support 20,000+ concurrent users.
- Optimized PostgreSQL queries, reducing execution time by 40% and saving the engineering team 15+ hours of manual tuning per month.
- Maintained 99.9% system reliability by strengthening backend security protocols and implementing robust error-handling for high-traffic environments.
- Streamlined development cycles by 35% through improved API documentation and cross-functional collaboration with frontend teams.

Technical Skills

- **Programming Languages:** Java, Python, JavaScript, TypeScript, SQL, C++, C, PHP, Shell Scripting, HTML/CSS
- **Frameworks & Libraries:** React.js, Next.js, Node.js, Express.js, Spring Boot, Angular, Vue.js, TailwindCSS, Redux Toolkit
- **Cloud & DevOps:** Amazon Web Services (AWS), Docker, Kubernetes, Git, GitHub, Postman, Jenkins, REST APIs, Microservices
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, SQL Server, Redis
- **AI & Machine Learning:** Pandas, NumPy, Scikit-learn, NLP, LLM Integration (Llama 3.1, Gemini Live), Groq API, Model Interpretability (LIME), Data Visualization
- **Tools:** Agile/Scrum, Jira, Figma, Cloudinary, JWT, WebSockets, Microsoft Office Suite, Google Workspace, Data Structures and Algorithms, Object Oriented Programming, Database Management Systems

Projects

Courtroom Chaos | *Runner-Up & Judges' Favorite – Google DeepMind Hackathon @ UCLA*

- Developed a live multiplayer courtroom game powered by Gemini Live API where an AI judge listens, interrupts, and delivers real-time scored verdicts for 3-6 players.
- Architected a voice pipeline with WebSocket-based multiplayer, speech recognition, and live LLM inference for seamless real-time player–AI interaction with sub-second latency.

TutorLLM | *AI-Driven Personalized E-Learning Platform*

- Built a full-stack AI e-learning platform using MERN stack and Meta's Llama 3.1 via Groq API, generating personalized curricula with automated YouTube video synthesis in under 15 seconds, serving three user roles across 24 features.
- Engineered a dual-mode learning system with AI-generated module progression, mastery-based quizzes, and an instructor-led course system; optimized backend performance with Redis caching, JWT authentication, and Clean Architecture pattern.

Language Translation Tool

- Designed an NLP system supporting 100+ languages with automatic detection and real-time asynchronous processing.
- Integrated Speech-to-Text (STT) and Text-to-Speech (TTS) pipelines to improve accessibility and user interaction.
